Pizza Production Lines

From silo to truck
Pizza is the favourite food of many people around the world.

What could be more delicious than a top quality pizza crust topped up with tomatoes, cheeses, vegetables, meats, olives and spices?

Endless variations on a solid basis of well prepared and tastily baked pizza. Exactly right, in every respect!

Making high quality pizzas is an art in itself. Kaak Group fully supports you in mastering this art in the most efficient and effective way, on the basis of our proven turnkey concept ‘From Silo to Truck’. The Kaak Group is the leader in meeting the demands of complex sales markets for bread and other baked products.
We offer you the combined strengths of our separate brands - Driem, Daub, MCS, Benier and Kaak FPS - in a dedicated industrial pizza production line, developed and engineered to the highest standards and the most stringent quality requirements. A no-fuss, no-worry state-of-the-art business solution, which helps you develop your business to the max!

Our highly qualified experts in six subsidiaries and eight divisions focus on developing and providing optimal technical and technological variations and nuances for each pizza production. Within the Kaak Group, we combine the in-depth knowledge of our engineers and technologists into a flexible system, to deliver the finest customized solutions.

Your result: authentic products made on tailor-made automated pizza production lines which comply with the different requirements and are convincing in terms of economy and ecology.

“Endless variations on a solid basis of well prepared and tastily baked pizza”

The Kaak Group
The Kaak Group can boast of more than 100 years of experience in the Bakery world. As a single supplier we can guarantee a uniform standard, from beginning to end and the perfect integration of all components involved in terms of construction, use, maintenance, interfacing and service. Kaak Group offers you a specialised ‘Pizza Team’, ready to play!
Because of the right combination of players within the Kaak Group we can offer you a vast array of possibilities in a.o. dimensions, design and capacity.

The back office integration of the different Kaak specialists enables the dedicated Pizza Team to work on the definition of the required process technology and the coordination of project data efficiently and quickly in order to present a tailor-made solution to the customer.

As a single supplier and applying the widest range of equipment available, the Kaak Group can propose the most efficient solution, also considering use of space.

All our mechatronic equipment is cleverly and efficiently designed and robustly made in stainless steel, applying the best known and most appreciated mechanical, pneumatic and electrical components globally available.

That is where your expertise comes in! You decide what specific concept to use, depending on the specific pizza market you want to operate in. The Kaak Group will team up with you when excellent product consistency and perfect control of every single phase in the production process are needed.

You can rely on the Kaak Group in every conceivable way, starting with tests, demo or product development in our Kaak Technology Centre (KTC). Our competences cover all required engineering and (after) sales activities, ranging from design, development and production to installation, commissioning, training staff and operational support.
Combined advantages

The Kaak Pizza Production Line benefits from all the combined advantages the Kaak Group can offer! We have the wide experience, the specific knowledge and the right company structure to supply or develop top quality tailor-made equipment, meeting the highest technical, hygienic and safety standards.

The Kaak Group introduces all components of its fully integrated Pizza Product Line
When it comes to choosing a pizza sheeting line, DrieM is the answer. The most innovative design, the best dough handling, the easiest cleaning, the most friendly HMI, all brought together to give you the best experience in sheeting pizza.

A process suitable for handling a wide range of doughs with full control over size, shape and thickness according to present and future needs. High capacity, minimum labour and low maintenance are additional arguments to go for a sheeting line process.
Hot Pressed pizza on trays: decades of relevant experience grant MCS the competence, the confidence and the references to be a world leading company. With our lines, millions of pizzas are made every day. If this is what you like to make, we know how to do it!
Hot press on belt: the way to stick to the traditional process of handling the dough while saving a lot of labour, controlling size and shape during make-up. A true alternative to cross pinning. You can choose to continue portioning, rounding and proofing in the usual way with the MCS Hot-Press to produce the perfect pizza ready to be directly baked in the oven.
Proofing or resting: whatever your process needs to make the perfect pizza, MCS has the solution. All our Proofers offer the right environment and conditions to get the best out of your dough. MCS exclusive Climatization unit offers maximum temperature and humidity control to guarantee excellent consistency of your product. Several vertical ducts, located at the sides, recycle a large air volume at very low speed. The robust stainless steel structure and the special hygiene and safety design complete the concept of the MCS Proofer.
In order to produce thin pizzas with a nice rim and an open structure, give them ‘a rest’ in your process using a belts-proofing chamber; tension-free and developed dough will make the difference in your product.

DHP Oven: short baking, high temperature, radiant heat and natural stone make this the oven for a genuine Italian pizza.
IMS Oven: convection heat and fast changeover make this oven suitable for various types of pizza.

BM Oven: radiant and conduction heat make this oven suitable for a longer baking time of pizza on trays.
Benier, the **gentle touch** to your pizza dough

Mixing, dividing, rounding, proofing... this is what Benier became famous for in more than 100 years of experience. The gentle touch of our machine will develop the best quality of pizza dough.

**Take control of your dough with MDD Mixer**

This capable mixer, with its proven kneading performance, is the perfect solution for a high capacity pizza production plant. Improved and reproducible straight dough consistency due to:

- temperature control;
- using vacuum and/or pressure;
- optimised batch amounts.

Ingredient supply and mixing process, brought together in one system by one supplier.

Pizza Topping Line: a **Key element** in Kaak Turn-Key program

Topping, the final touch to make your Pizza delicious even at first sight. From the simplest tomato dosing to the richest topping, we offer you a tailor-made solution. No matter what “pre or post bake”, “waterfall or border-free”, “chilled or frozen”, we guarantee an accurate, efficient and hygienic depositing of your garniture ingredients.
Kaak Bakeware, made by Kaak for your pizza

Custom-designed for your baking line and tailor-made for your product. Kaak Bakeware takes care of every one of your single specific needs to guarantee the best product.

Multiparts, for conveying & cooling your pizza’s

Conveying your products with our stainless steel hygienic design conveyors is what we have been doing at Kaak for almost fifty years. Today, our own Kaak belts (the Multi-Way & Multi-Curve belts) are still the most used plastic modular conveyor belts in the bakery industry over the world. The quality of our conveying systems is well known. The new improved hygienic design of all our conveyors make them easy to clean with and without water. Multiparts can be the connecting element in your pizza production line.
